TUTKIMUS**

# The most used mushroom species

Boletus

Cantharellus

# The most used mushroom species

Lactarius

**METLA**

Sievänen, Pouta & Neuvonen

# Background

- Wild mushrooms are still widely used as a part of daily diet
- Nowadays picking mushrooms is a leisure activity, the interest has been growing during the last decades
- There are voluntary organizations to enhancing mushroom picking to households by providing exhibitions of edible mushrooms, maps of good picking sites etc.
- Metla provides forecasts of mushroom crops regionally
- a growing branch of industry;

Boletus -mushroom export to Italy!

Sievänen, Pouta & Neuvonen

METLA

# Aim of the study

- to improve understanding of the importance of mushroom picking among the Finnish population
- to produce models which allow calculations for predictions of number of pickers, geographical distribution of forest land needed for picking etc.

# Data and methods

- Population survey in 1998-2000
- Sample 12000; response rate 84
- Telephone interview data has 10651 respondents
- Mail questionnaire data has 5535 respondents; 2736 mushroom pickers
- description statistics (distributions, means, medians), cross tabulations and  $\chi^2$  -test
- logistic regression modeling

# Socio-economics related to participation in mushroom picking

# Mushroom picking participation in regions

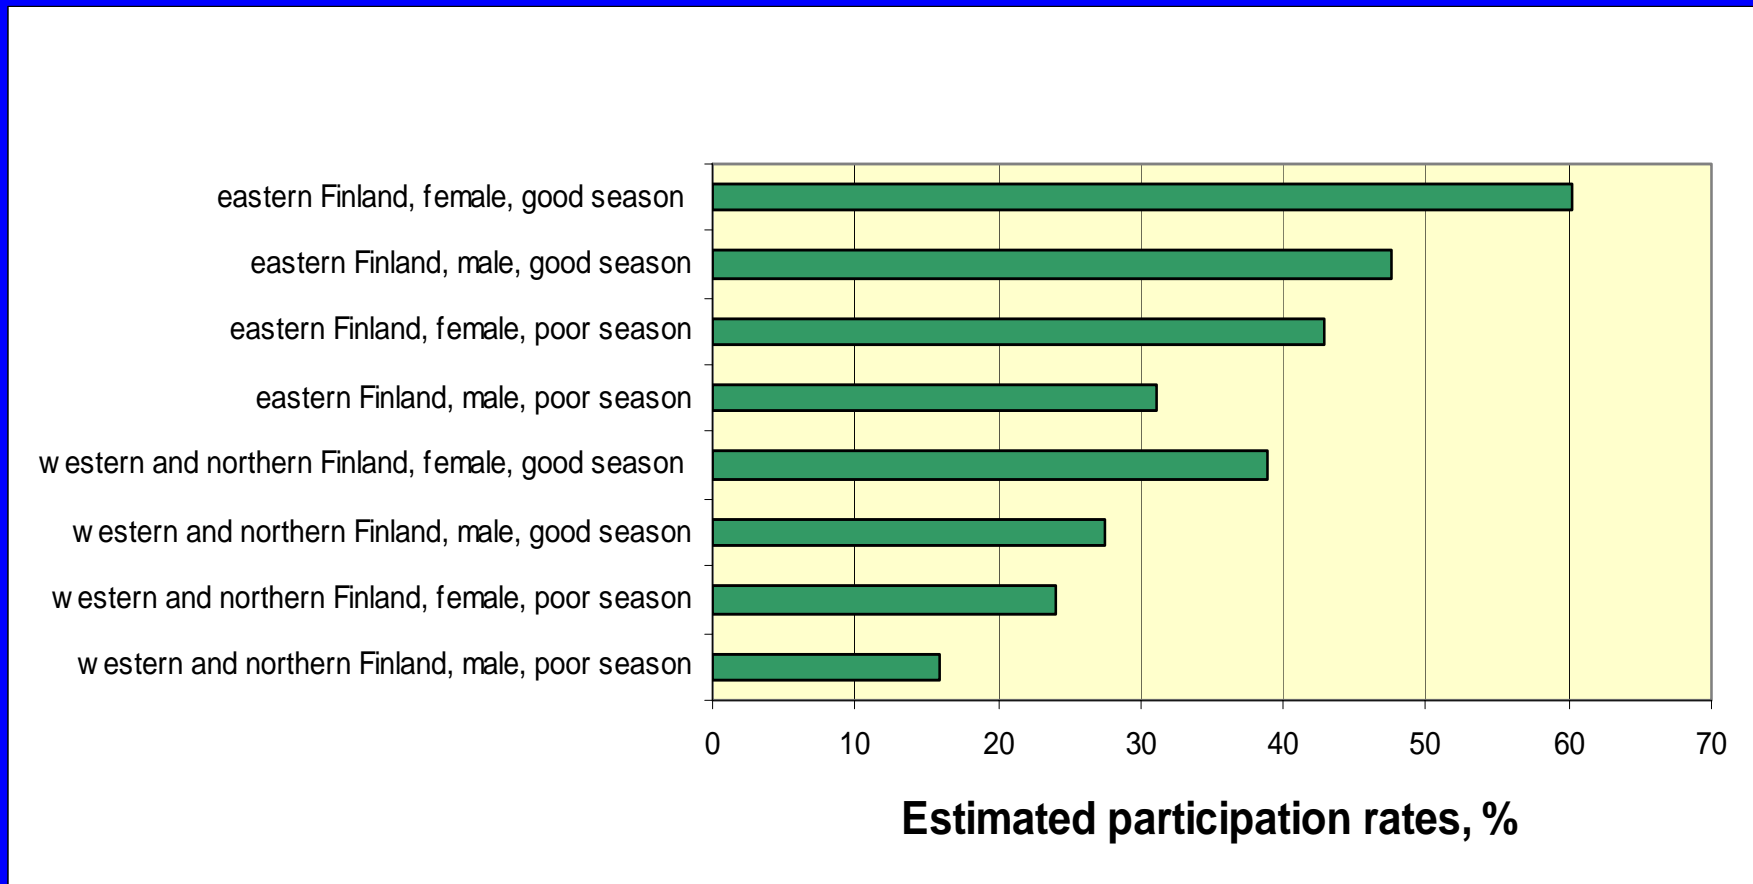

Participation rate, %

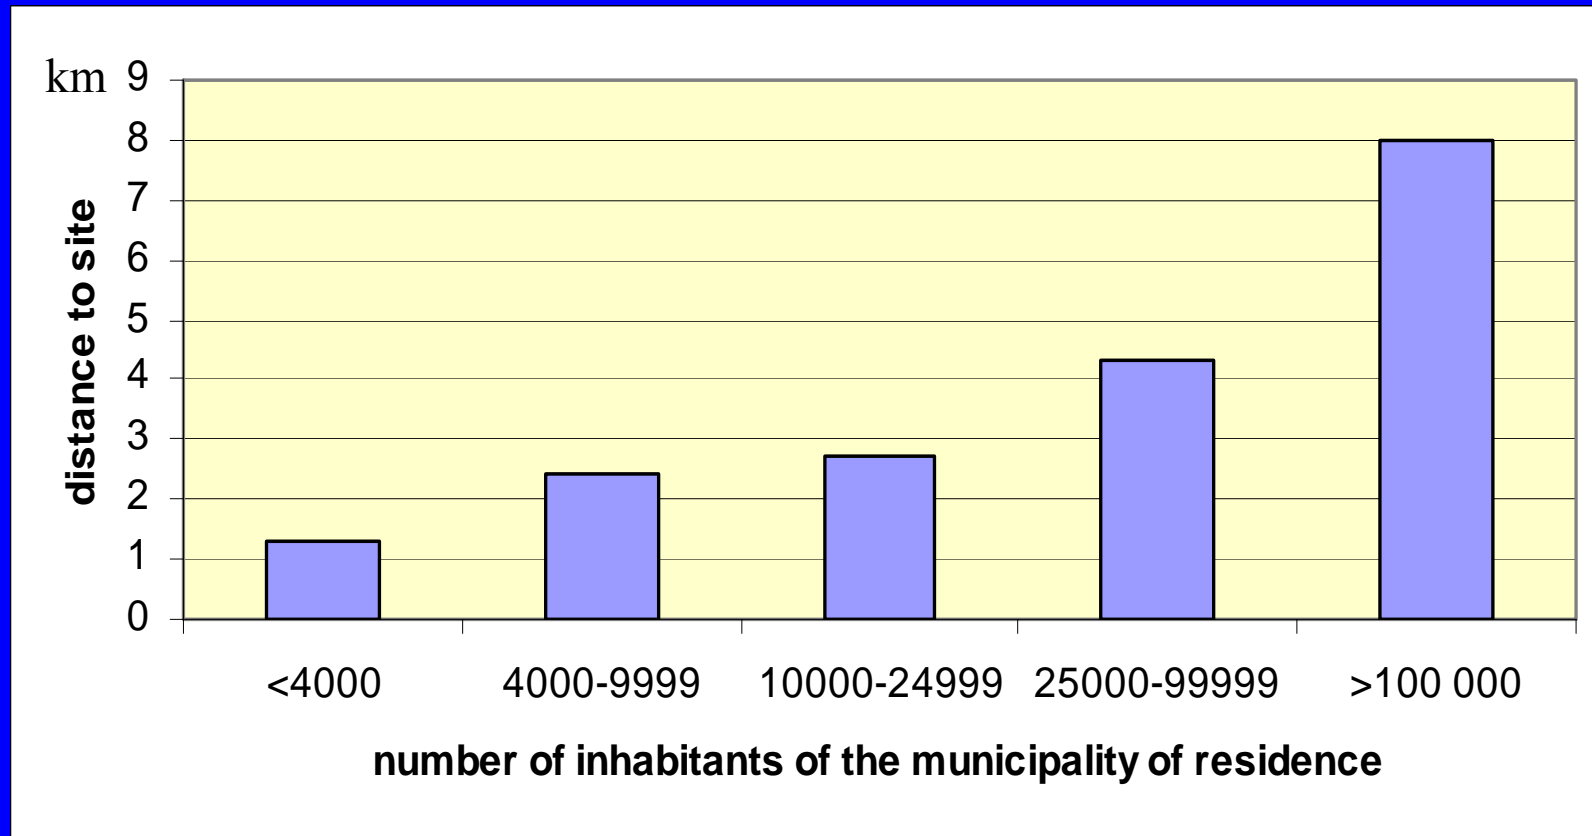

# Participation in mushroom picking, logistic regression model

# Learning to pick mushrooms

## As a child

- women
- young
- beyond secondary education
- in labour force or student
- living in a city, large size
- living in southern or eastern Finland
- urban childhood
- modern outdoor activities: downhill skiing, spending time at vacation home

## As an adult

- man
- middle aged or old
- secondary education
- farmer or pensioner
- living in rural areas
- living in western Finland
- rural childhood
- traditional outdoor activities: picking berries, hunting, fishing

# Frequency, time and money for recreation

	Learned as a child	Learned as an adult
	mean (median), difference significant * - **	
number of picking occasions per year in average	6,3 (4,0)	7,8 (5,0) **
outdoor recreation, participation, number of hours per week	8,7 (5,8)	9,2 (6,5) *
number of outdoor recreation occasions during the days off or weekend per week	1,1 (1,0)	1,2 (1,0) **
amount of money spent for outdoor recreation, Euro per occasion in average	15,6	22,3 **

# Conclusions

- Mushroom picking seems to be highly related to regional culture
- Mushroom pickers are active outdoor people
- Mushroom picking has increased its popularity among well-educated urban people even that it is consumptive recreation activity
- It is likely that mushroom picking will continue to attract urban people in future

# Discussion

- Management practices of close-to-urban forests which are suitable for mushroom picking should consider mushroom picking as valuable type of use
- Commercial mushroom picking has a lot of potential in Finland, and it could be supported more by government

Mushrooms  
make us  
happy!!  
Thank you

men
