Virallisen lajikekoetoiminnan tehtävänä on siemenkauppalaikiin perustuen selvittää uusien lajikkeiden viljelyarvo ennen niiden viljelyyn ottamista. Virallinen lajiketutkimus tehdään Maatalouden tutkimuskeskuksen (MTTK) eri laitoksilla ja koeasemilla sekä kasvinjalostajien koepaikoilla. Lajiketutkimusta tehdään kaikilla tärkeimmillä viljelykasveilla. Virallista lajikekoetoimintaa johtaa MTTK:n kasvinviljelylaitos, Jokioisissa.

Virallinen lajikekoetoiminta muodostaa perustan kaikelle peltokasveista annettavalle tiedolle ja neuvonnalle. Lajiketutkimus käsittää sekä alustavat että viralliset lajikekokeet, joissa lajikkeen viljelyvarmuus, satoisuus ja laatu määritetään. Lajikkeen kokeilu virallisessa kokeessa kestää vähintään 3 - 4 vuotta, jolloin lajikkeesta on käytettävissä noin 40 - 50 kokeen tulokset.

Virallisia kokeita järjestetään kaikkiaan 19 koepaikalla (kuva 1). Kunkin kasvilajin kokeilu tapahtuu pääosin sen viljelyyn soveltuvalla alueella käytännön viljelyä vastaavissa kenttäkokeissa. Esimerkiksi kevätvehnän lajikekokeet ovat pääosin Etelä-Suomen lajikekoepaikoilla. Vastaavasti ohralajikkeita kokeillaan mallasohraa lukuunottamatta koko maassa. Virallisiksi kokeiksi hyväksytään myös kasvinjalostajien viralliset kokeet MTTK:n kasvinjalostuslaitoksella ja Hankkijan kasvinjalostuslaitoksella sekä Keskon koetilalla. Tärkkelys- ja ruokateollisuusperunan lajiketutkimusta tehdään yhteistyössä Perunantutkimuslaitoksen kanssa.

Virallisten lajikekokeiden tulosten perusteella päätetään myös Maatilahallituksen kasvilajikeluetteloon otettavista lajikkeista. Virallisessa lajikeluettelossa pidettävistä lajikkeista päättää Maatilahallitus. Kasvilajikeluettelo julkaistaan vuosittain vuoden lopulla (liite 1). Lajikeluettelon tarkoituksena on ohjata lajikevalintaa viljelyarvoltaan parhaisiin lajikkeisiin sekä toimia lajikeneuvonnan ja lajikevalinnan perustana.

2. KOETULOSTEN TULKINTA

Tässä vuosittain julkaistavassa virallisten lajikekokeiden tulostiedotteessa on esitetty lajikekokeiden tulokset vuodelta 1975 - 1982. Tulokset on esitetty kunkin lajikkeen viljelyalueelta parivertailuna mittarilajikkeeseen. Parivertailussa mittarin ja koelajikkeen tulokset ovat aina peräisin samoista kokeista. Parivertailumenetelmästä johtuen muita lajikkeita ei kuitenkaan voida verrata tulos- taulukoissa suoraan keskenään, koska tulokset ovat peräisin eri kokeista.

Tuloksissa on mukana lajikkeiden satotulokset viljelyvyöhykkeittäin, maalajeittain ja koepaikoittain eriteltyinä. Nurmikasvien satotulokset esitetään myös nurmen iän mukaisesti ryhmiteltyinä. Koetulosten lukumäärä on ilmoitettu vain satotulosten osalta. Havaintojen ja määritysten tulosmäärä voi kuitenkin olla satotulosten lukumäärää pienempi.

Ohran ja kevätvehnän koemaiden maa-analyysi ja viljavuus-tiedot on esitetty maalajeittain (taulukko 1, 2). Lajikkeiden viihtyvyyttä ja happamuuden sietokykyä tarkasteltaessa on syytä kiinnittää huomiota maalajeittaisiin tuloksiin. Ohralla ja kevätvehnällä erityisiä happamuudenkestävyyskokeita ovat kahdella koepaikalla tehdyt liejusaven kokeet, joissa maan pH ja viljavuus on erityisen alhainen. Happaman maalajin koetulokset eivät ole mukana lajikkeiden kokonais-tuloksissa.

Seuraavassa esitetään tulostaulukoiden tulkintaan liittyviä yksityiskohtaisia ohjeita.

Viljelyvyöhyke - sarake osoittaa alueen, jolta tulokset on laskettu. Laskentaan ei ole otettu tuloksia mittarin viljelyaluetta pohjoisempaa. Suluissa oleva numero ilmoittaa pohjoisimman vyöhykkeen, jolle lajiketta suositellaan viljeltäväksi tai jolle se kasvuaikansa puolesta soveltuu.

Vuosi ilmoittaa, miltä vuodelta ovat peräisin ensimmäiset lajikkeen yhteenvetoihin sisältyvät tulokset.

Kokeita kpl ilmoittaa, kuinka monessa kokeessa lajike on ollut ko. mittarin kanssa, eli monenko parivertailun keskiarvo laskettu satotulos on.

Mittarin sato kg/ha on mittarin keskimääräinen sato niistä kokeista, joissa se on ollut ko. lajikkeen kanssa.

Lajikkeen suhdeluku on lajikkeen keskimääräinen suhteellinen sato verrattuna edellisen sarakkeen mittarin satoon.

Kasvuaika, korkeus, lako, 1000-jyvän paino, hehtolitrainpaine, valkuais-%, sakoluku, talvituho-%, kuori-% on ilmoitettu poikkeamana mittarin tuloksesta.

Sakoluku 1 on määritetty normaaliin viljan korjuu-aikaan.

Sakoluku 3 on määritetty 1 - 3 viikon kuluttua normaalia korjuu-aikaa myöhemmin, sakolukujen alettua selvästi laskea.

Valkuaissato on ilmoitettu kuiva-ainesatoa kohden ja on ilmaistu kymmeninä kiloina. Esim. 65 = 650 kg/ha.

Öljysato kg/ha on ilmoitettu kuiva-ainesatoa kohden.

Keitto 60 min sarakkeen luvut ilmoittavat, kuinka monta prosenttia herneistä on pehmennyt tunnin kestäneen keittämisen aikana.

Nurmikasvien sato tarkoittaa kuiva-ainesatoa ja tulos on ilmaistu kymmeninä kiloina. Esim. sato 567 = 5670 kg/ha.

Nurmikasvit korjuukerta 1 tarkoittaa ensimmäisen niiton satoa korjuukerta 9 kasvukauden niittojen satoja yhteensä.

Perunan laatuarvostelun asteikot:

- 100 = täysin ruton saastuttama
 100 = myöhäisin
 9 = paras ulkonäkö
 9 = paras sileys
 9 = suurin rupisuus
 9 = suurin pintavikaisuus
 9 = suurin maltovikaisuus
 9 = suurin jauhoisuus
 9 = paras maku
 9 = pienin tummuminen
 9 = pienin rikkikiehuminen

Taulukko 1.

Ohran koemaiden maa-analyysitulokset maalajeittain v. 1975-82

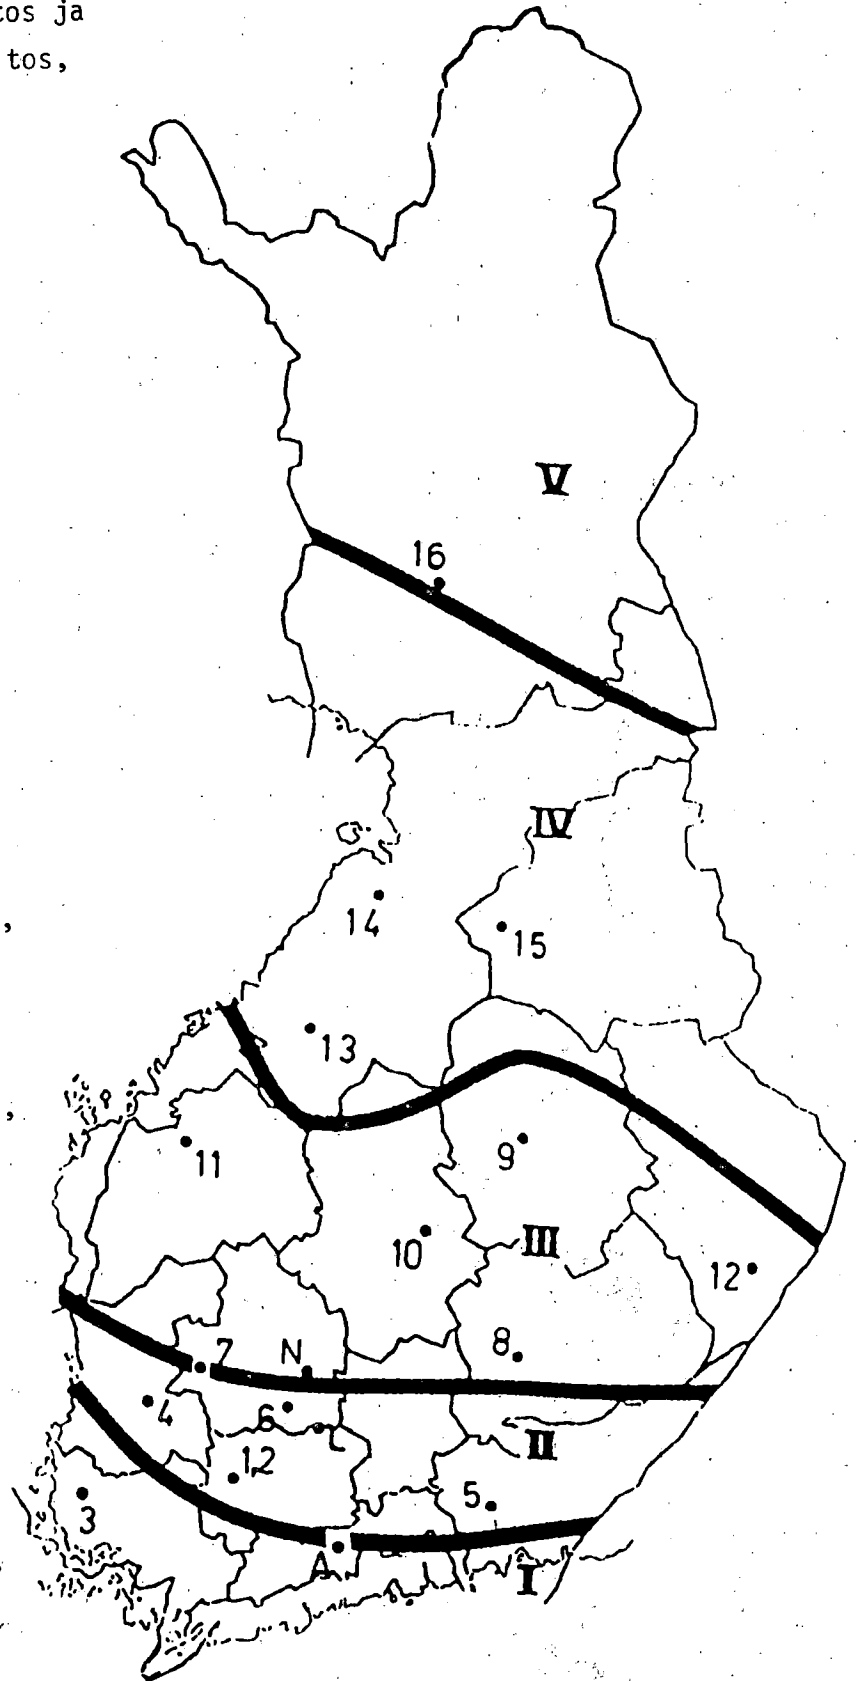

| Maalaji | pH | Ca | mg/l | | |
|-----------------------|-----|------|------|------|-----|
| | | | K | P | Mg |
| Karkeat kivennäismaat | 6.0 | 1322 | 200 | 14.6 | 73 |

N:o 827

Maatilahallituksen päätös tärkeimpien kasvilajien lajikkeista

Annettu Helsingissä 2 päivänä marraskuuta 1982

Maatilahallitus on siementavaran kaupasta 25 päivänä elokuuta 1975 annetun lain (669/75) 8 §:n 1 momentin ja siementavaran kaupasta mainittuna päivänä annetun asetuksen (670/75) 7 §:n nojalla hyväksynyt vuodeksi 1983 seuraavan luettelon niiden tärkeimpien kasvilajien lajikkeista, joiden viljely on osoittautunut tarkoituksenmukaiseksi:
